Year 2 - Arithmetic Expectations

This series of documents aims to summarise the number facts, mental calculation strategies and the stage(s) of the progression towards the written methods for each of the four operations.

For each strategy, the concrete and pictorial representations have been suggested. However, to keep the document to a more manageable size, the imagery has not been shown explicitly as this should be found in your school's agreed mental calculations policies.

The strategies used within this document are taken from the Lancashire Mathematics Team Progression in Mental Calculation Strategies Policies and the Progression Towards Written Methods Policies.

See www.lancsngfl.ac.uk/curriculum/primarymaths for the full policies.

Each strategy will require specific modelling (teaching) and sufficient practice for children to develop confidence, accuracy and fluency in performing them.

Children should also be taught when it is appropriate to use each strategy, by looking at the numbers involved and making effective decisions. Again, this is a sign of a child's fluency in mathematics; being able to recognise which strategy best suits a given calculation, rather than always using the same method regardless of the numbers involved.

Special thanks to the following teachers who helped to create these documents:

Sue Byrom – Colne Park Primary	Naomi Tyson – Gisburn Road Community Primary	Hannah Blackburn – Lowerhouse Juniors
Tara Warbrick – Colne Park Primary	Nick Browne – Gisburn Road Community Primary	Jess Dornan – Lowerhouse Juniors
Jane Dempsey – Burnley Springfield Primary	Laura Mitchell – Burnley St Stephen's CE Primary	Michelle Hume – Whittlefield Primary
Andrew Douglas – Burnley Springfield Primary	Moira Waller – Burnley St Stephen's CE Primary	Stephen Riley – Whittlefield Primary

Arithmetic Expectations – Year 2

Skills	Examples			
Counting				
Count in multiples of 2, 3 and 5 from 0. (Counting in 2s and 5s from 0 is continuation of Year I expectations).	Count from 0 in: twos; fives; threes. Complete these counting sequences: 0, 5, 10, 15, 20,,, 0, 2, 4, 6, 8,,, 0, 3, 6, 9,,, What number is missing from this counting sequence? 0, 3, 6, 9, 12, 15, 18, 24, 27			
Count forwards or backwards in steps of I or I0 from any one- or two-digit number	Count forwards in ones from 75 to 92 Count back in ones from 54 to 38 Continue these sequences: 24, 34, 44,,, 89, 79, 69,,, 44, 34, 24,,			
Count on and back in steps of $\frac{1}{2}$ and $\frac{1}{4}$	Count from 0 in steps of $\frac{1}{2}$ When counting from 0 in steps of $\frac{1}{4}$ what comes immediately after $\frac{3}{4}$? Answer could be $\frac{4}{4}$ or I Count back in steps of $\frac{1}{2}$ from $\frac{6}{2}$ Count back in steps of $\frac{1}{2}$ from $2\frac{1}{2}$			
Number Facts				
Recall number bonds and related subtraction facts for all numbers to 20	16 + 4 = 2 + = 20 20 = + 5 20 = 1 6 = 20 3 + 14 = 5 + _ = 14 14 = + 6 14 - 2 = 14 = 3 5 = 14			
Derive and use related facts to 100	60 + 40 = 70 + = 100			
Partition numbers into tens and ones.	46 is 40 and 6 46 is 40 and 46 is 6 and 40 + = 46 6 + 40 =			
Recall and use number bonds to 5 totalling 60 (to support time).	40 + 20 = 25 + = 60 60 = + 15 60 - 10 = 60 = 30 35 = 60 6 x 2 = 2 x = 16 x 5 = 15 = 5 x 7 110 ÷ 10 = = 80 ÷ 10			
Recall and use multiplication and division facts for 2, 5 and 10 multiplication tables, including recognising odd and even numbers.	6 x 2 = 2 x = 16 x 5 = 15 = 5 x 7			
Mental Calculation Strategies – Addition and Subtraction				
Count on or back in ones and tens from any given number, e.g. (36 + 40 =) Concrete – Diennes equipment, place value counters, beadstring Pictorial – Diennes jottings, number line	36 + 40 = 30 + 48 = 89 - 50 = 76 = 46			
Partition and combine multiples of tens and ones. Concrete – Diennes equipment, place value counters, beadstring Pictorial – Diennes jottings, number line	40 + 37			

	28 + 3 doesn't need reordering as the greater number is first already	
Reorder numbers in a calculation.	2 + 17 reorder as 17 + 2	
Concrete – Diennes equipment, place value counters, beadstring	5 + 63 reorder as 63 + 5	
Pictorial – Diennes jottings, number line	16 – 8 will not give the same answer if reordered	
Find a small difference by sounting up from the lossey to the greater	52 – 47	
Find a small difference by counting up from the lesser to the greater number	74 – 66	
	81 – 79	
Concrete – Diennes equipment shown horizontally, beadstring Pictorial – Number line	32 – 25	
Pictoriai – Nurriber line	52 - 25 58 + 5 = 58 + 2 = 60	
Begin to bridge through 10 when adding a single digit number		
(partitioning, e.g. 58 + 5 = 58 + 2 + 3)	60 + 3 = 63 50 + 3 = 53	
Concrete – Diennes equipment, place value counters, beadstring	(2 + 0 - (2 + 7 - 70	
Pictorial – number line	63 + 8 = 63 + 7 = 70	
	70 + 1 = 71 50 + 5 = 55	
	34 + 9 as 34 + 10 - 1	
Add or subtract 9 or 11 and 19 or 21 by rounding and compensating.	34 + 11 as 34 + 10 + 1	
Concrete – Diennes equipment, place value counters	77 + 19 as 77 + 20 – 1, or 77 + 10 + 10 – 1	
Pictorial – number line, 100 square	46 – 9 as 46 – 10 + 1	
, i	46 – 11 as 46 – 10 – 1	
	63 – 19 as 63 – 20 + 1, or 63 – 10 – 10 + 1	
	s – Multiplication and Division	
Apply counting in twos, threes, fives and tens to solve multiplication	5 x 4 count in fives until fact is known	
problems with a repeated addition context. 3 x 10 count in tens until fact is known		
Concrete – real items to model the context of the problem, Multilink arrays, beadstring	7×3 using a representation then count in threes	
Pictorial – images of the items in the context of the problem, jottings, arrays, number line		
Share an amount into equal parts.	24 ÷ 2 share out until fact is known	
Concrete – real items to model the context of the problem	40 ÷ 10 share out until fact is known	
Pictorial – images of the items in the context of the problem 18 ÷ 3 using a representation to share 18 into 3 equal parts		
	24 ÷ 2 repeated subtraction until fact is known	
Separate an amount into equal groups using repeated subtraction.	40 ÷ 10 repeated subtraction until fact is known	
Concrete – real items to model the context of the problem, Multilink arrays, beadstring	18 ÷ 3 repeated subtraction to find how many 3s are in 18	
Pictorial – images of the items in the context of the problem, arrays, jottings, number line	I have 24 sweets. How many children would get 2 sweets?	
Trecords arrays, journeys, formers arrays, journeys, formers	There are 30 bears who live on one street. Three bears live in every house.	
	How many houses are on the street?	
Derive and use doubles of simple two-digit numbers.	Double 43 is double 40 (80) plus double 3 (6) = 86	
(of which the ones total less than 10)	24 add 24 is double 20 (40) plus double 4 (8) = 48	
Concrete – Diennes equipment, place value counters	2×33 (two lots of 33) is double 30 (60) plus double 3 (6) = 66	
Pictorial – Diennes jottings	2 x 33 (tho lots of 33) is double 30 (00) plus double 3 (0) = 00	
Derive and use halves of simple two-digit number even numbers.	Half of 64 is half of 60 (30) plus half of 4 (2) = 32	
(of which the tens are even)	Halve of 28 is half of 20 (10) plus half of 8 (4) = 14	
Concrete – Diennes equipment, place value counters	46 ÷ 2 is half of 40 (20) plus half of 6 (3) = 23	
Pictorial – Diennes jottings	10 · 2 is hall of to (20) plus hall of 0 (3) - 23	

Progression Towards	s Written Calculation Strategies – Addition
	34 + 23 = ? The units/ones are added first 4 + 3 = 7 The tens are added next 30 + 20 = 50 Both answers are put together 50 + 7 = 57
Add two, two-digit numbers Concrete — Diennes equipment, place value counters Pictorial — Diennes jottings	28 + 36 = ? The units/ones are added first 8 + 6 = 14 with ten units/ones exchanged for 1 ten. A ring is put around the units/ones not exchanged — this is the units part of the answer. The tens are then added, including the exchanged ten, to complete the sum.
Progression Towards V	Written Calculation Strategies – Subtraction
	39 – 17 = ? 39 is drawn 17 is crossed out A ring is drawn around what is left to give the answer of 22
Subtract a two digit number from a two digit number Concrete — Diennes equipment, place value counters Pictorial — tens and ones jottings	37 – 19 37 is drawn 9 units/ones cannot be crossed out, so one ten is crossed out and exchanged for 10 ones which are in a line. e is written next to the exchanged ten. 19 is crossed out A ring is drawn around what is left to give the answer of 18

Progression Towards Written Calculation Strategies - Multiplication How many eggs are needed to fill the box? How many eggs would fill two boxes? Children arrange items into equal groups Recognise multiplication as real arrays and understand that multiplication is repeated addition and the total can be found by counting in equal and count to find the total. 0000000000000000 steps/groups. Concrete – real arrays e.g. baking trays, ice cube trays, egg boxes, cubes, counters Pictorial – images of real arrays, rectangles drawn on squared paper 00000 Children understand how arrays can show 00000 repeated addition of rows and/or columns and that multiplication is commutative i.e. that 3×5 gives the same answer as 5×3 5+5+5=15 3+3+3+3+3=15 **Progression Towards Written Calculation Strategies - Division** $12 \div 3 = ?$ Children begin to read this calculation as, 000|000|000|000| Represent division calculations as grouping (repeated subtraction) and use 'How many groups of 3 are there in 12?' jottings to support their calculation. Introduce simple remainders as the items are shared into equal parts, but some may be left over. Concrete – real sets of items, cubes, counters At this stage, children will also be introduced Pictorial – images real items, rectangles drawn on squared paper to division calculations that result in remainders. 00000000000 $13 \div 4 = 3$ remainder 1 **Decision Making** When calculating, children should ask themselves: - do I know the answer because it is a fact I have learnt?

- can I work it out easily in my head?
- can I use some equipment or a jotting?

The strategies used within this document are taken from the Lancashire Mathematics Team Progression in Mental Calculation Strategies Policies and the Progression Towards Written Methods Policies.

See www.lancsngfl.ac.uk/curriculum/primarymaths for the full policies.
